RE E-00000J-09-0505

Arizona needs a Feed In Tariff for solar. It is now in place in 10 other States in the US. It will help prove in more solar projects from small to large and get things moving for non profits and other entities that can't participate under current rules. The commission also needs to provide funding for home and business under the existing rules. Each time the funds run out it causes many small solar companies to layoff or go out of business.

The FIT has to be priced at the right level and adjusted just like the FIT in Germany and the other states in the US. The results and progress of the FIT will also have to be tracked and adjusted just like the existing solar incentives so they don't run out or get over subscribed. There should be rules to make sure they go to many different sized projects and local companies. The administration of this new plan is key. Less pollution, more jobs and a stable future will result.

I would be glad to help at no charge and work with any members of the AZCC or community to make sure FIT is implemented properly to get results just like Germany and other locations have done. The articles in
